Empower

Empowering People

One App to Rule Them All

Seamlessly Integrate

- Solar PV
- Battery
- EV Charging
- Water Heating

With Patented AI Optimisation & Wholesale Energy Integration.

Try it Out!

Empowering People

Unlock Maximum Savings

Traditional batteries simply charge when there's excess solar, limiting savings to just **28¢/kWh** and only during times of excess, i.e. the summer months, and under-utilised during the winter months and rainy days, which occur 1 out of every 3 days in Sydney!

But what if you could offer more?

Introducing the Smartest Solar Battery Yet

Capture Peak Value

Our battery charges during excess solar and during off-peak periods when there is insufficient excess solar, discharging precisely at peak times **(a net savings of 29¢/kWh)**. Unlike schedule-based systems, our smart battery adapts dynamically—no missed opportunities, delivering max savings every day.

Wholesale Market Integration

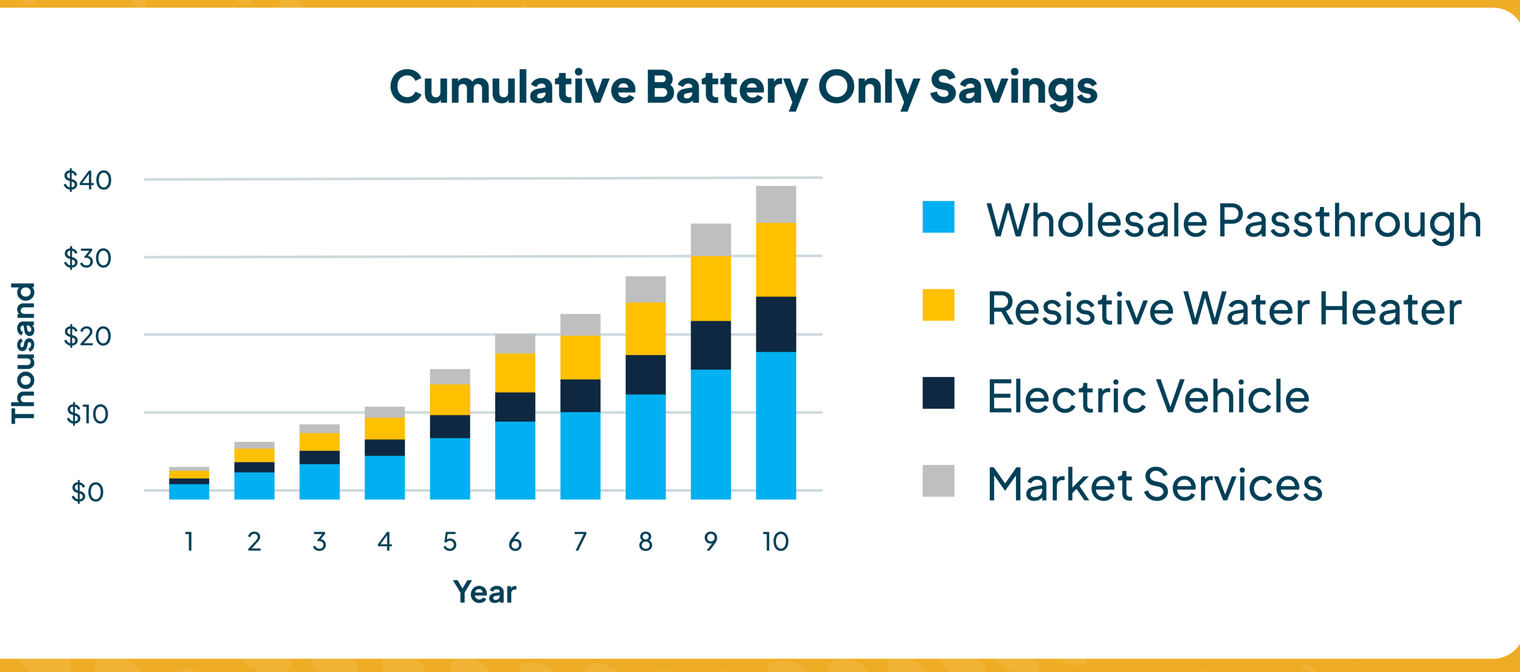
Our solution taps into wholesale prices as low as **1–3¢/kWh** (far below standard tariffs) and feed-in tariffs of up **$12/kWh**! Our patented, AI-driven system automatically buys low and sells high, achieving **40% more savings** than the competition on average.

Control EV Charging and Water Heating

Our battery doesn't just manage solar energy. It expertly controls 3rd party electric storage water heaters and EV chargers, **buying power at rock-bottom prices** (around **1–3¢/kWh** wholesale), avoiding costly price spikes, and delivering an **additional $500–$750 in annual savings**.

Future-Proof Your Solar Battery, Boost Your Savings

Choose a battery that does more, saves more, and pays for itself faster than any other battery.



Go smarter. Get empowered.
